Agricultural.

Effects of Feeding Cut and Uneut Hay to Milch Cows.

From a communication made to the Massachusetts, by Mr. William S. Lincoin, we make the following extract. We copy from the "New England Far-

cow which came in on the 26th of October, the two trial cows, and the other which calved last April, and is expected to calve again the 1st of next April .--Some time before commencing this experinent, I was feeding my stock-what Globe, and, if possible, in time, to perfect it would be called poor stock-with hay, into a full history of the action of Congress with an allowance of roots. I commenced cutting this hay for all my stock, of an official record. From the passage in young and old, (sixteen head) occupying my 12 hours only. Almost simultane- thought this office might be combined with ous with feeding the cut hay was on in- that of a regular newspaper; and it is certain crease of milk very perceptible as it was milked in the pail. An inquiry was give wings to the weightier matter which made by my wife, who in person takes sole charge of the dairy, as to the cause of this increase. An evasive reply was made. From day to day the milk increased enough for the substitution of six shall outstrip full and accurate intelligence quart for four quart pans, which had sent from the sent of Covernment in any been previously used. I think I am within bounds in saying that the increase within two hundred and fifty miles of Washwas over a pint daily per cow, occasioned, to the best of my knowledge, solely by papers, (for instance, of the city of N. York.) the use of cut hay."
